

# DIGITAL DJ INTERFACE

*IS YOUR VENUE'S AUDIO SYSTEM OFTEN LEFT DISCONNECTED BY DJ'S AFTER THEY'VE BROUGHT IN THEIR LATEST SCRATCH DEVICE OR LAPTOP?*

This problem is solved with the Digital DJ Interface (ddi) – the perfect 'Break In' box for any venue. It gives your guest DJs all the 'ins' and 'outs' they require, without affecting the house set up. At the end of the night, they unplug their gear and everything is back as it should be. **SIMPLE.**

As one of the countries leading installers of sound systems, SSE Audio Group created the ddi to minimise the need for supplying expensive technical support to clubs and other venues. The high volume of call outs we receive, to “put the system back together” set us on the search for a reliable solution to handle the requirements of guest DJs – and one that would be self funding from the savings in call out charges!

The Digital DJ Interface is a compact 1U rack mounting patchbox that is permanently connected to installed house DJ systems and enables digital playback systems such as the Serato Scratch Live or Final Scratch\* to be temporarily connected without disturbing the installed cabling. This means hum and hiss, loss of signal, and crossed wires, are all prevented when these playback systems are removed and taken away at the end of the night. This is achieved by connecting the house system cables to the rear panel of the ddi, while visiting DJs connect their laptop or scratch system via the fully accessible front panel. Their digital playback hardware can be used in conjunction with the installed system in any combination of CD, turntables and DJ Mixer, with turntables or CDJs used as the timecode trigger device. Using the ddi has the added advantage of zero loss in level from vinyl playback, as the signal is passively split within the unit. At the end of the performance the visiting DJ simply removes the kit they've connected. There is no need to re-patch anything; the house system is back as it should be. A quick and simple solution!

The unit features gold plated connectors for optimum audio quality, and has a beautiful engraved aluminium front panel anodised purple.

\* Serato Scratch Pro is a trademark of Serato Audio Research and FinalScratch is a trademark of Stanton Magnetics.
